## Avanti Engineering, Inc.

has the capability to produce virtually any part on our state-of-the-art Screw Machines and CNC machining equipment. All of our parts feature extreme precision and unmatched quality, all at an affordable price.

Avanti Engineering goes the extra mile to ensure that each and every part is machined with precision and uniformity. Our engineers have extensive knowledge of design solutions and processes, employing a comprehensive array of resources and tools that allow Avanti to meet your machined part production requirements. Our engineers are able to review the part or a drawing and perform evaluations to:

- Provide Part Design Engineering Services and Prototypes
- Analyze customer drawing or part to improve its quality
- Advise on steps to achieve cost reduction of component machining
- Consult on design performance improvements
- Troubleshoot the machining process to increase productivity
- Test part conformity and quality

*We work in partnership with our customers to produce a part design that meets specifications for function and quality, and can be manufactured in the required volumes at the specified price point. We deliver the detailed functionality and quality specified, with lower lead times to support our goal of meeting and exceeding your expectations.*

Contact Avanti Engineering today to inquire about our consulting and engineering services.
